Who has used GPT/Gemini/...?

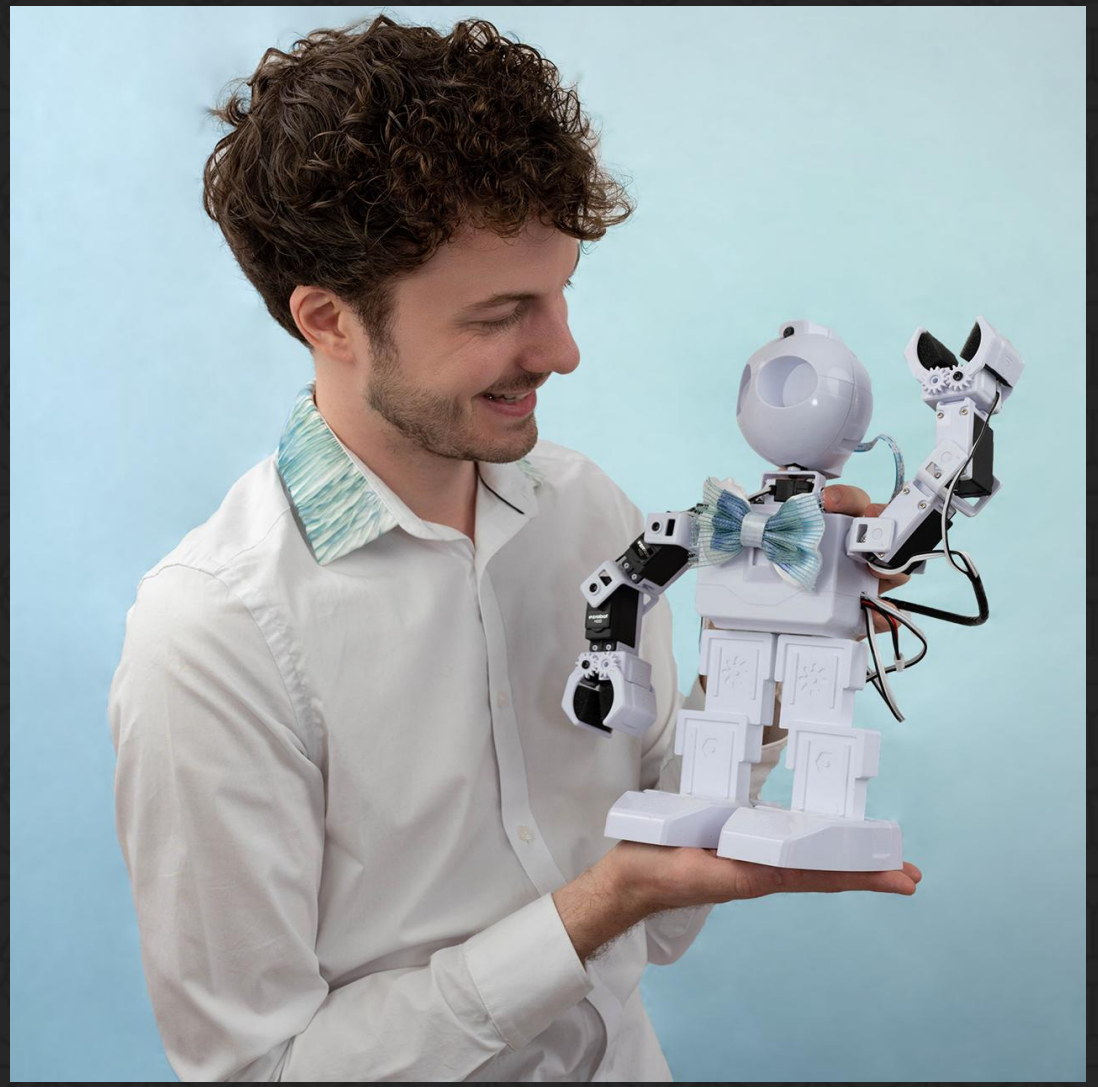
Who has used GPT to solve an actual need (work, study...)?

Who found task that GPT can’t do?

Thomas Winters

- PhD student in creative AI & language models since 2018 at DTAI
- Co-authored RobBERT model
  (state-of-the-art Dutch BERT language model)
- Since GPT-2 (2019) experience with met GPT-modellen *(humor, Improbotics...)*

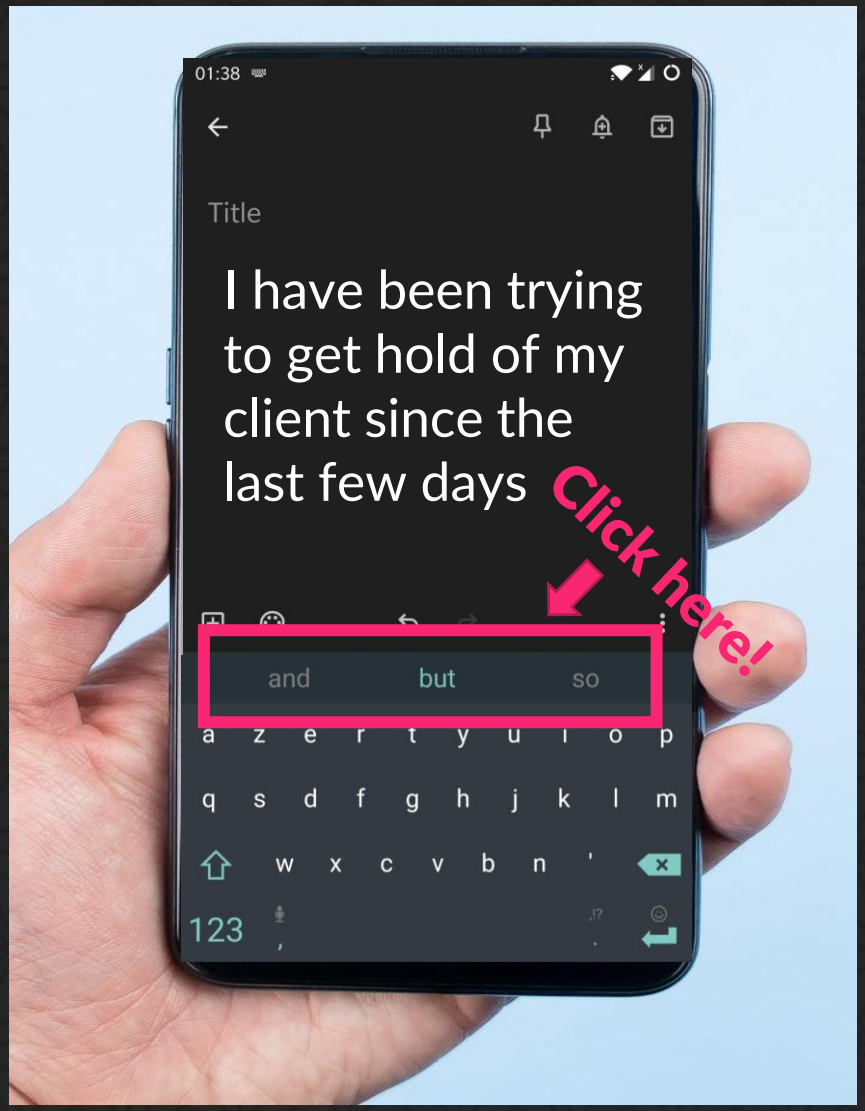
KU LEUVEN LEUVEN.AI DTAI



Textgeneration History

Overview on the ~4 GPT waves

How do autoregressive language models work?



1. Open smartphone **keyboard**
2. Press any **autocomplete** word 20x
3. You've just generated a sentence using an AI trained to **sound similar to you**!

Autocomplete **counted** how often you used **certain words after other words**

Example: TorfsBot

1. Counted in all tweets & columns of Rik Torfs how often one word follows others

2. Then starts with two random words and randomly select words Rik used after the last couple of words

https://thomaswinters.be/torfsbot

Autoregressive models like GPT

≈ autocomplete on steroids

The next word for this charade is

sentence = 10.48%
list = 6.61%
phrase = 6.43%
definition = 6.12%
sequence = 4.07%
char = 0.15%

Total: -6.49 logprob on 1 tokens
(33.86% probability covered in top 6 logits)

Probability of next token given *previous tokens*

GPT training

Whole textual internet

Training process of several million $

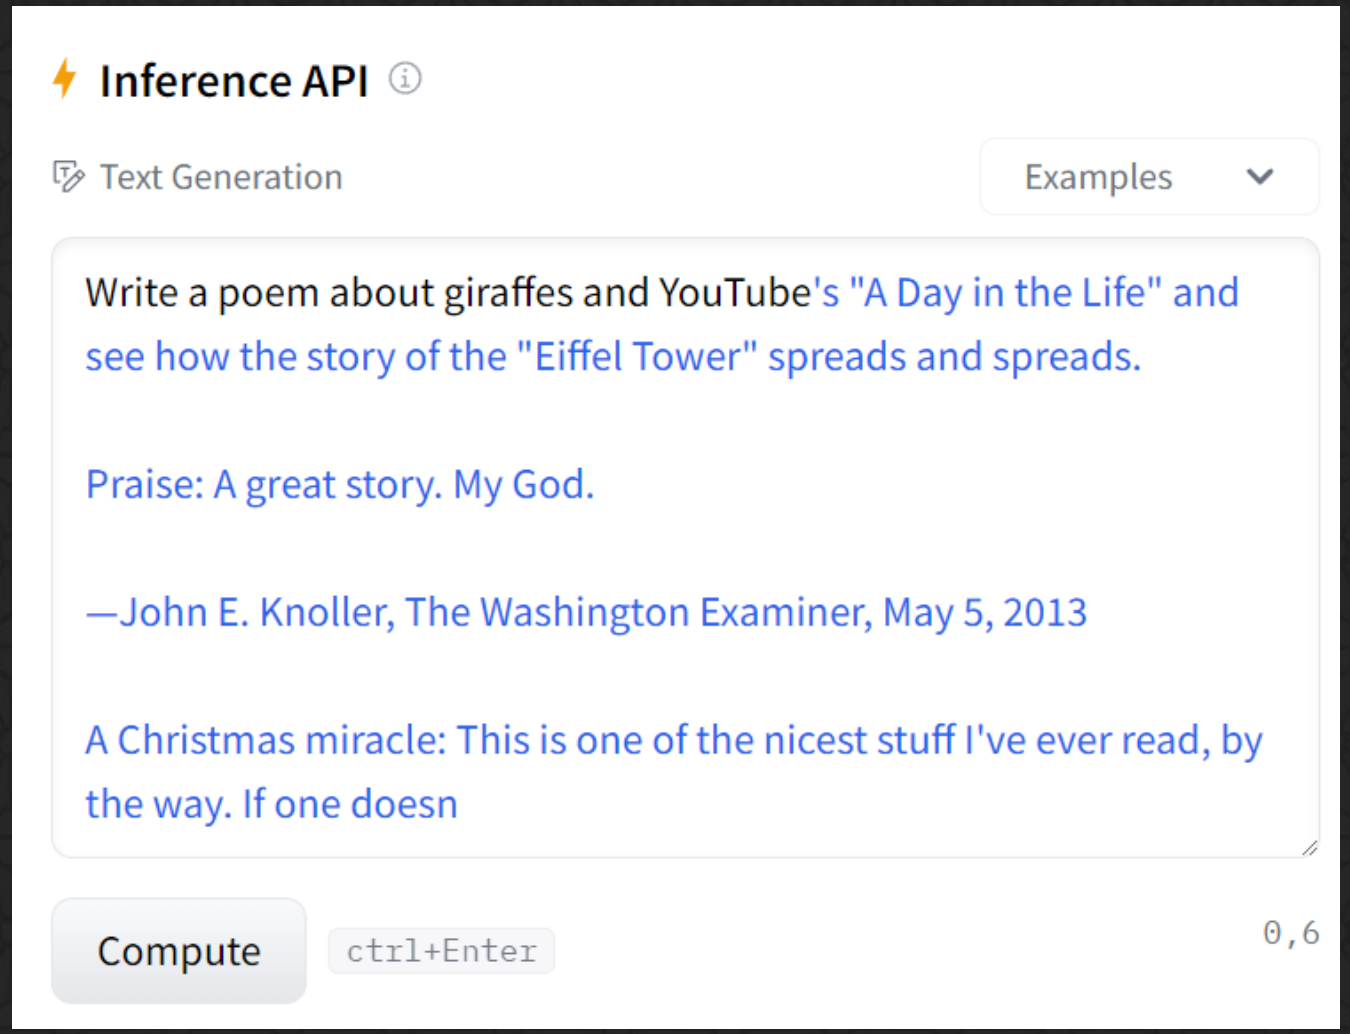
GPT-2



Pretrained on large part of internet

Keeps babbling

Usually finetuned to particular need

→ **Pretrain & Fine-tune**

https://huggingface.co/gpt2

Tokens	Characters
119	414

GPT-3 tokenizers words to be able to input them as integers in the model.

The tokens are chosen in such a way that common substrings have their own token. It is purely frequency-based, and do not need to make morphological sense: e.g. gothic

In English, common words are usually a single token.
In het Nederlands is dat vaak andere koek.
Vandaar dat het moeilijker lettergrepen en rijmen snapt in het Nederlands.

https://platform.openai.com/tokenizer

Comment: Toledo is so slow and unstructured, I can't find anything!
Sentiment: Negative

Comment: The new Ultra seems nice!
Sentiment: Positive

Comment: I keep getting lost trying to find Bethlehem aula!
Sentiment: Negative

Comment: I love the winter break!
Sentiment: Positive

Comment: i can't find the athletic gyms during det period!

First GPT-3 (2020)

Can do task given few examples
= **Pretrain & Few-shot Prompt**

Keeps babbling after answer

e.g., "hallucinating" non-existing comments

4000 tokens input-output limit

Instruct GPT-3 (2022)

Write a list of topics covered in KU Leuven's NLP course

1. Introduction to natural language processing
2. Fundamentals of linguistics and language processing
3. Preprocessing and tokenization
4. Part-of-speech tagging and text classification
5. Named entity recognition
6. Sentiment analysis and opinion mining
7. Word sense disambiguation
8. Syntax and parsing
9. Semantic role labeling
10. Information extraction
11. Text summarization
12. Machine translation

Follows instructions

= **Pretrain & Zero-shot Prompt**

Shuts up when completed

Less toxicity & hallucinations

RLHF *(Reinforcement Learning from Human Feedback)*

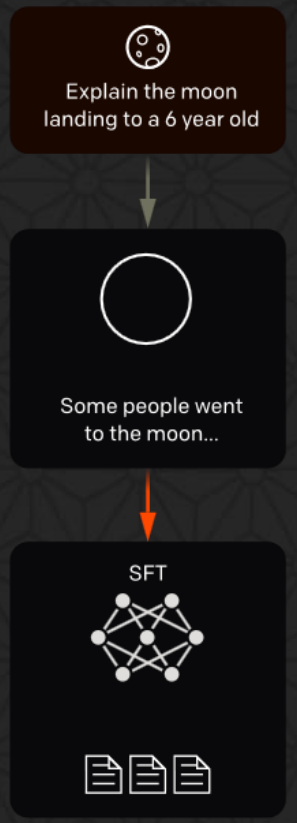
Step 1

Collect demonstration data, and train a supervised policy.

A prompt is sampled from our prompt dataset.

A labeler demonstrates the desired output behavior.

This data is used to fine-tune GPT-3 with supervised learning.



Step 2

Collect comparison data, and train a reward model.

A prompt and several model outputs are sampled.

A labeler ranks the outputs from best to worst.

This data is used to train our reward model.

Step 3

Optimize a policy against the reward model using reinforcement learning.

A new prompt is sampled from the dataset.

The policy generates an output.

The reward model calculates a reward for the output.

The reward is used to update the policy using PPO.

Prompt
Engineering
Past:
How to implement AI?
Now:
How to optimally ask to
“general” AI?

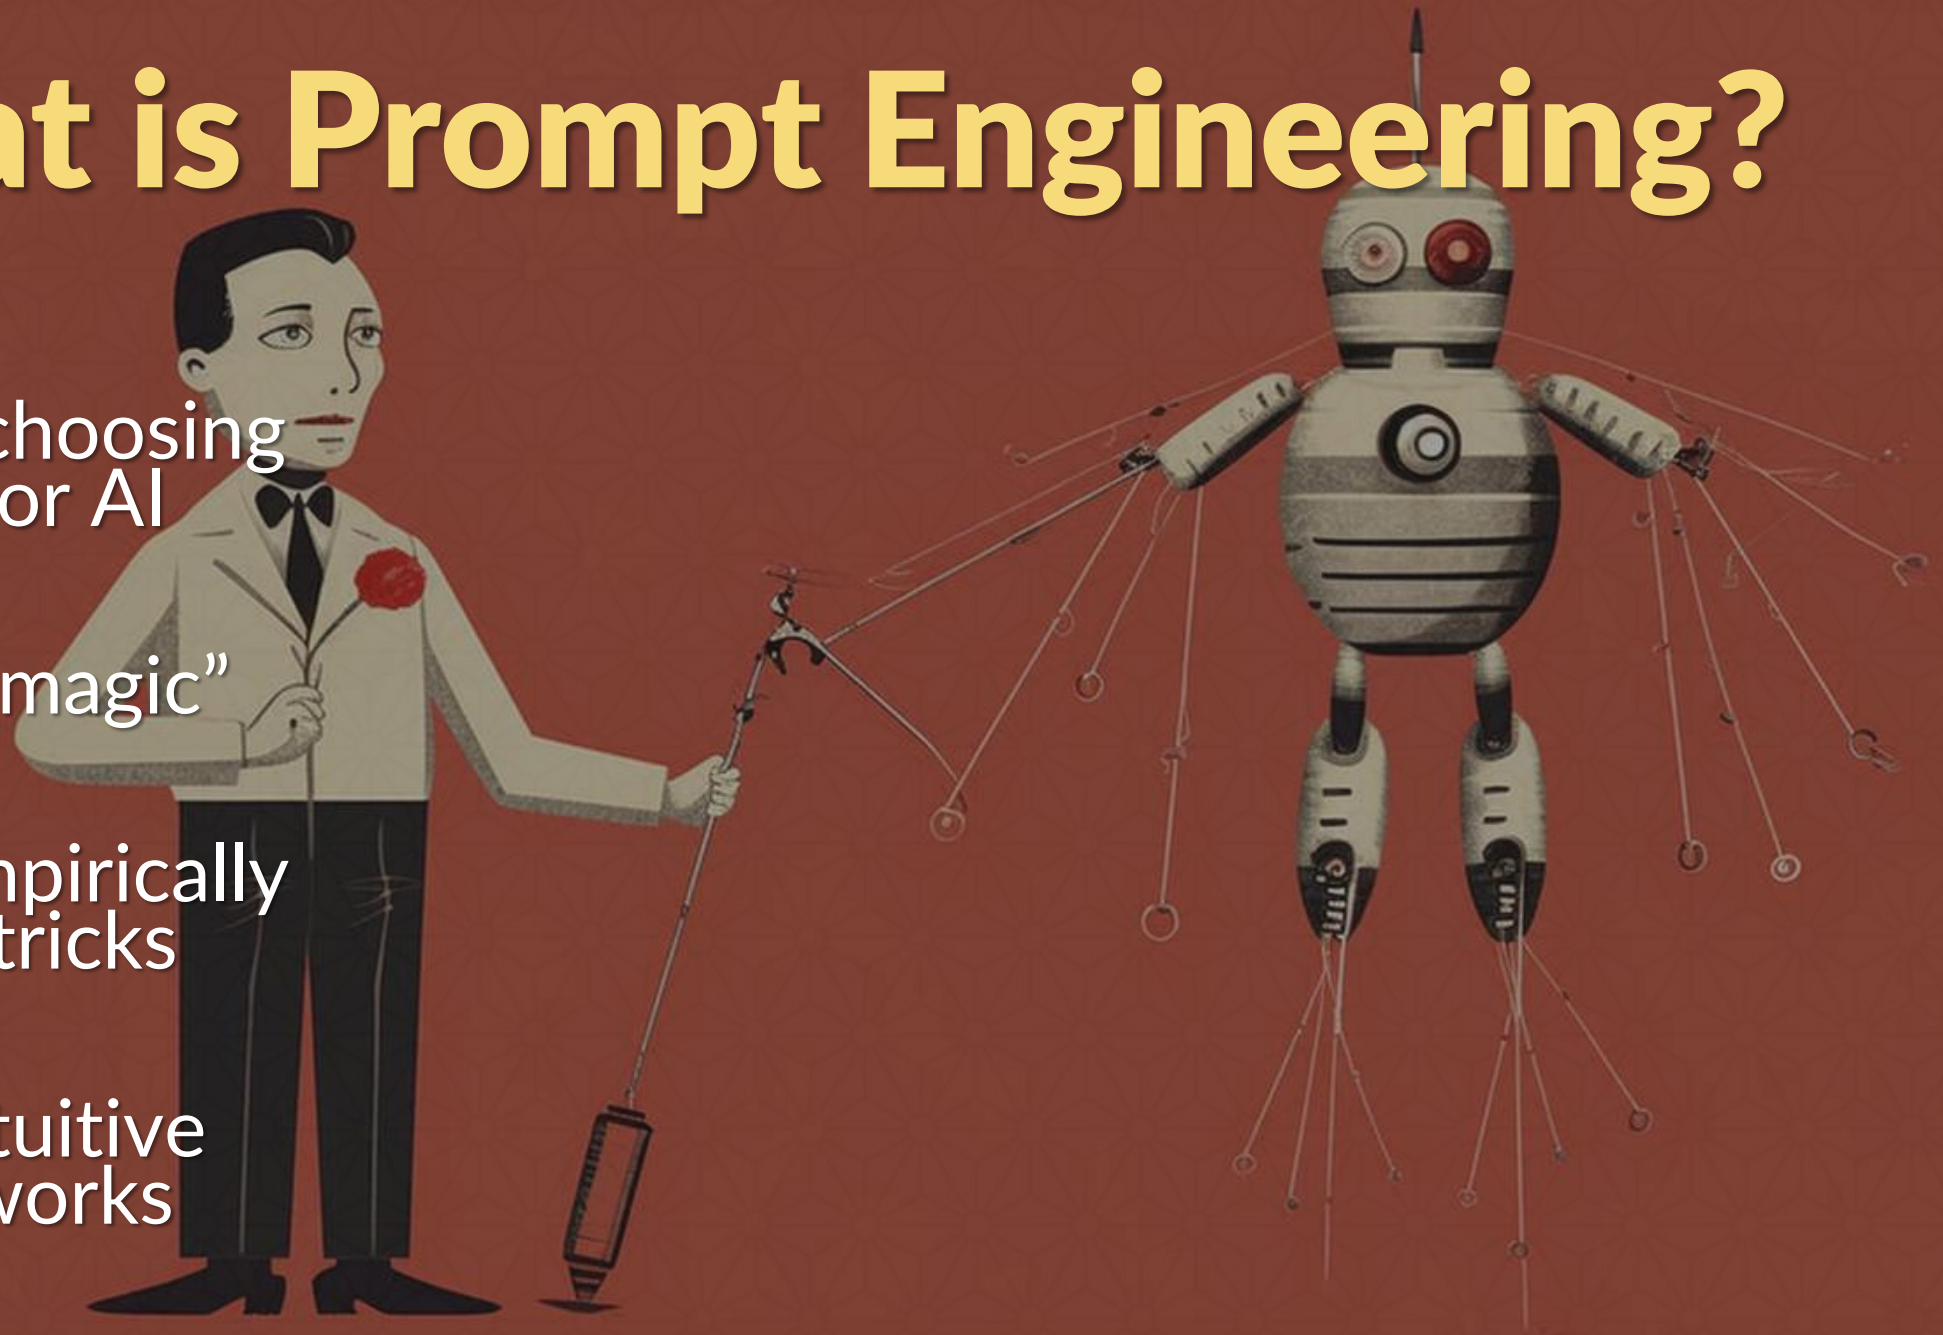
What is Prompt Engineering?

Optimally choosing words for AI

"Voodoo magic"

But also empirically proven tricks

Often intuitive why it works



5 tricks for enhancing
any creative task prompt

Base: simple write instruction prompt

USER	Write a joke for literature students
ASSISTANT	Why did Shakespeare make terrible coffee? Because he always put too much Hamlet and not enough Macbrew!

Trick 1: Few-Shot prompt: Give handful of examples

USER

Write list of jokes for literature students
- Why did Shakespeare write in pen? Because pencils confused him: 2B or not 2B?
- I've taken up speed reading. Last night, I read Harry Potter in 20 seconds. I know it's only 2 words, but it's a start.
- Studying about fairy tales can be a Grimm business!

ASSISTANT

- Why did the grammarian go to jail? Because he committed a sentence.
- Why don't scientists trust atoms? Because they make up everything.
- What do you call a group of cows reading a book together? A herd of intellectuals.
- Why did the protagonist break up with the author? Because he was always putting words in her mouth.
- Why did the tomato turn red? Because it saw the salad dressing.
- Why did the poet break up with his girlfriend? Because she was always a syllable short of a haiku.
- What's the difference between a poorly dressed man on a trampoline and a well-dressed man on a trampoline? Attire.
- What do you call a book club that's been stuck on the same novel for years? Groundhog Day.
- What did Jane Austen say when she was offered a second cup of tea? "I must decline, for I am already Austen-tea-fied."

Trick 2: Role-prompting: Explain role

USER

You are a world-renowned expert in comedy with a proven track-record in writing jokes and stand-up comedy for audiences of students all around the world. I am looking for jokes that would appeal literature students. Your task is to write a list of literature-related jokes that relate to student life.

ASSISTANT

1. Why did the literature student always bring a pillow to class? Because they were studying the "dream" sequence.

2. How do literature students stay cool in summer? They sit under their Poe-tree.

3. Why did the literature student refuse to put their initials on their paper? They didn't want to be accused of self-Plath.

4. What's the difference between an English major and a pizza? At least a pizza can feed a family of four!

Tell ChatGPT to pretend to be an expert.

For example:
You are an expert X with proven track record on X'. I am looking to Y. Your task is Z. My first command is …

"localizes" task in model

GPT is bad at math?

Thomas takes a train from Leuven to Gent. Leuven Station and Gent have a distance of 100km. The train travels at 50km/h. The train also stops three times for 10 minutes each. How long is the train ride?

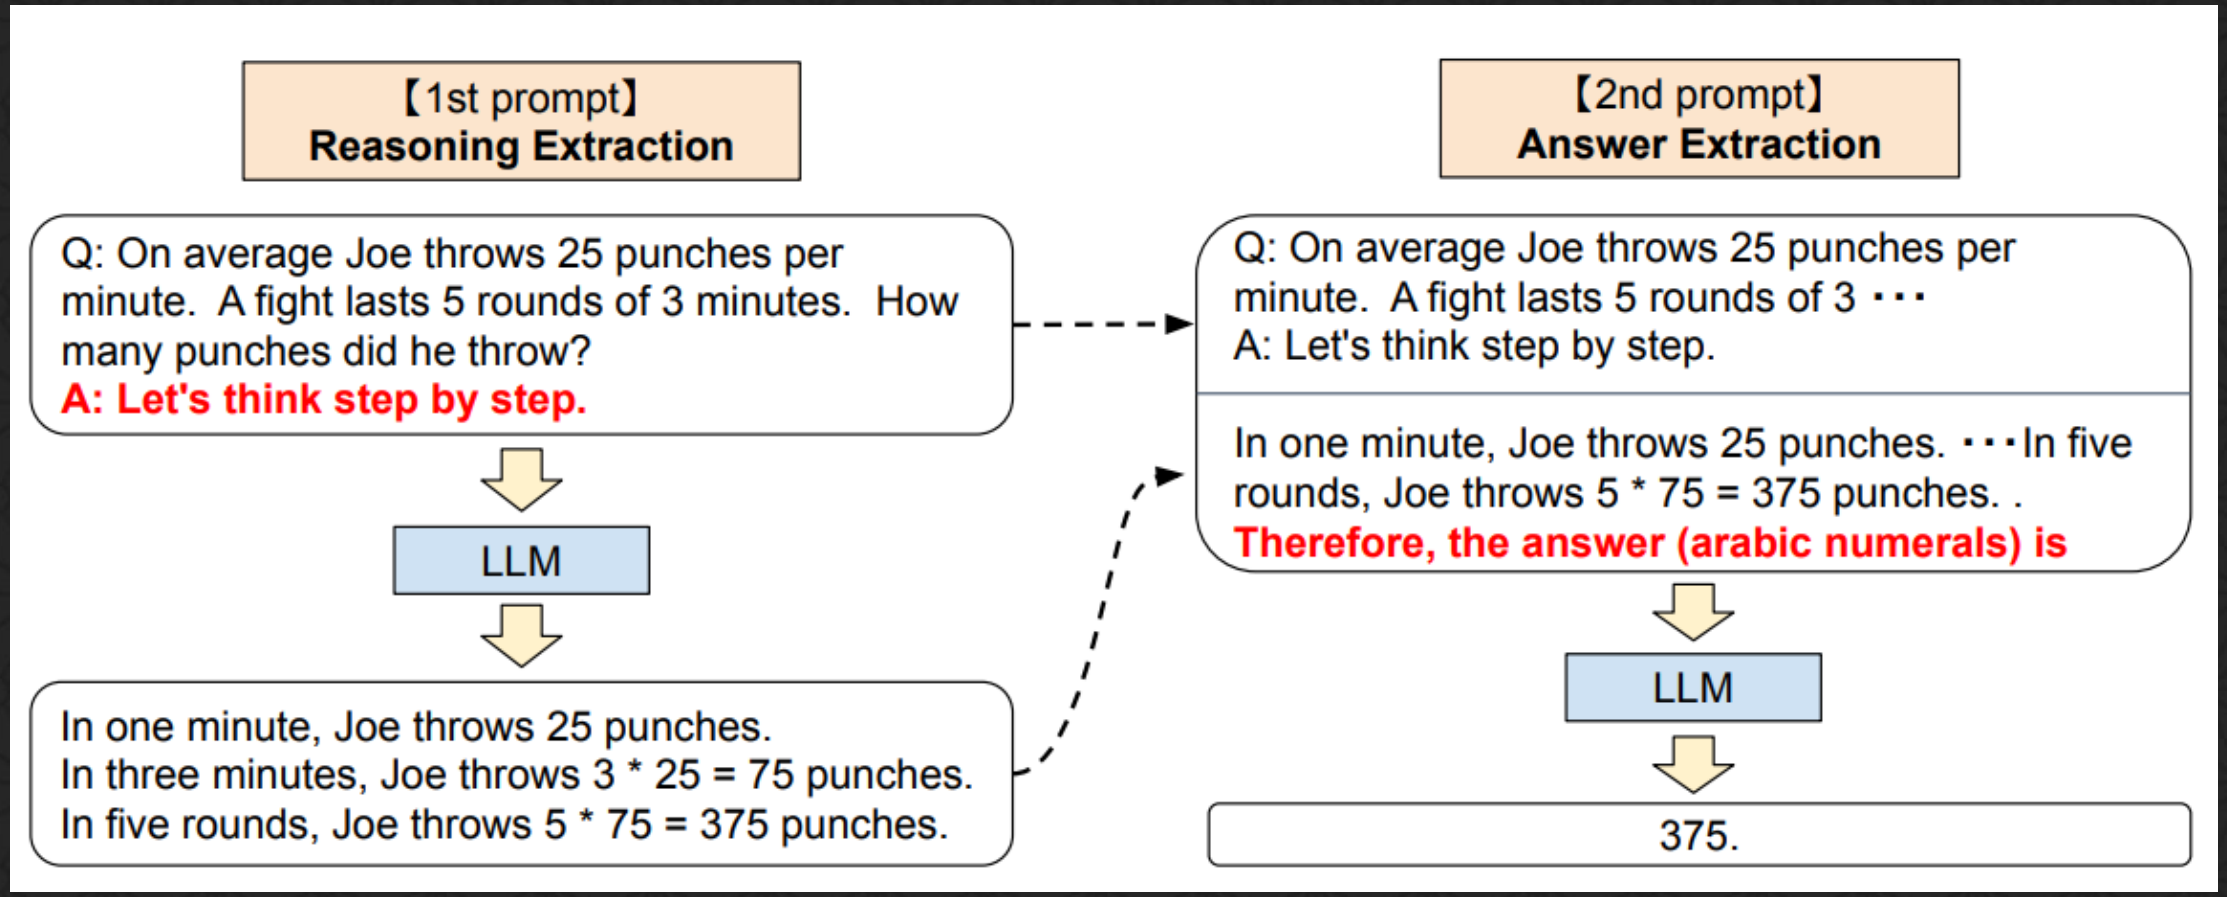
2 hours

Trick 3: Zero-shot Chain-of-Thought: Ask for reasoning steps

Thomas takes a train from Leuven to Gent. Leuven Station and Gent have a distance of 100km. The train travels at 50km/h. The train also stops three times for 10 minutes each. How long is the train ride? Let's think step by step.

The train travels at 50km/h, so it will take 2 hours to travel 100km. However, the train stops three times for 10 minutes each. This means that the train will spend a total of 30 minutes stopped. Therefore, the total train ride will be 2 hours and 30 minutes.

Zero-shot Chain-of-Thought



Extract the answer with a second call to LLM

Kojima, Takeshi, et al. "Large Language Models are Zero-Shot Reasoners." arXiv preprint arXiv:2205.11916 (2022).

USER

You are an expert comedy-writer with a proven track-record for writing jokes for students.
Every time you write a joke, you draft the joke by going through several distinct steps.

Q: Your task is write jokes that appeal to literature students

A: Let's think step by step.

Works for any task!

ASSISTANT

Step 1: Identify the target audience and their interests
- Target Audience: Literature students
- Interests: Classic literature, famous authors, literary terms and techniques, wordplay, character analysis, writing process

Step 2: Brainstorm relevant topics and concepts
- Shakespeare
- Jane Austen
- Edgar Allan Poe
- Charles Dickens
- Plot twists
- Unreliable narrators
- Poetry vs. prose
- Metaphors and similes
- Writer's block
- Allusions and references

Step 3: Develop joke ideas based on the brainstormed topics
- Shakespeare's love for puns
- Jane Austen's witty social commentary
- Edgar Allan Poe's dark humor
- Charles Dickens' character names
- Unexpected plot twists in literature
- Unreliable narrators causing confusion
- Comparing poetry to prose

Best in format "Q: ....
A: Let's think step by step."

Step 3: Develop joke ideas based on the brainstormed topics
- Shakespeare's love for puns
- Jane Austen's witty social commentary
- Edgar Allan Poe's dark humor
- Charles Dickens' character names
- Unexpected plot twists in literature
- Unreliable narrators causing confusion
- Comparing poetry to prose
- Misinterpreting metaphors and similes
- Writer's block struggles
- Allusions to other literature in everyday conversations

Step 4: Write jokes based on the developed ideas

1. Why did Shakespeare make terrible friends? Because he always had to have the last (word)play.

2. Jane Austen walks into a bar and orders a drink. The bartender says, "Austentatious choice, my lady."

3. How does Edgar Allan Poe like his coffee? Dark, just like his sense of humor.

4. Why was Charles Dickens always invited to parties? He was great at creating characters.

5. Why do literature students love plot twists? They keep us in suspense, just like our grades.

6. What did the unreliable narrator say to their therapist? "I promise, I'm not making this up!"

7. What's the difference between poetry and prose? Poetry is when you spill your feelings on the page, and prose is when you clean it up.

8. Why did the metaphor get in trouble? It was caught simile-ing.

9. What's a writer's favorite type of block? Writer's block, of course – it's the only one they can't avoid.

Step 5: Edit and revise jokes for clarity and punchiness

1. Why did Shakespeare have few friends? He couldn't resist a (word)play on words.

2. Jane Austen walks into a bar and orders a drink. The bartender smirks, "How austentatious!"

3. How does Edgar Allan Poe take his coffee? Dark and brooding, like his stories.

4. Why was Charles Dickens the life of the party? His character creations were a hit!

5. Why do literature students thrive on plot twists? They're used to being kept in suspense.

6. The unreliable narrator in therapy: "Trust me, I'm not making this up!"

7. Poetry vs. prose: Poetry spills feelings on the page; prose wipes it clean.

8. The metaphor got in trouble for simile-ing – it couldn't resist a pun.

9. Writers love one type of block: Writer's block, the one they can't escape

Zero-shot Chain-of-Thought

No.	Category	Template	Accuracy
1	instructive	Let's think step by step.	**78.7**
2		First, (*1)	77.3
3		Let's think about this logically.	74.5
4		Let's solve this problem by splitting it into steps. (*2)	72.2
5		Let's be realistic and think step by step.	70.8
6		Let's think like a detective step by step.	70.3
7		Let's think	57.5
8		Before we dive into the answer,	55.7
9		The answer is after the proof.	45.7
10	misleading	Don't think. Just feel.	18.8
11		Let's think step by step but reach an incorrect answer.	18.7
12		Let's count the number of "a" in the question.	16.7
13		By using the fact that the earth is round,	9.3
14	irrelevant	By the way, I found a good restaurant nearby.	17.5
15		Abrakadabra!	15.5
16		It's a beautiful day.	13.1
-		(Zero-shot)	17.7

Kojima, Takeshi, et al. "Large Language Models are Zero-Shot Reasoners." arXiv preprint arXiv:2205.11916 (2022).

Galactica: Chain-of-Thought token

Question: A needle 35 mm long rests on a water surface at 20°C. What force over and above the needle's weight is required to lift the needle from contact with the water surface? $\sigma = 0.0728\text{m}$.

<work>

$$\begin{aligned} \sigma &= 0.0728\ \text{N/m} \\ \sigma &= F/L \\ 0.0728 &= F/(2 \times 0.035) \\ F &= 0.0728(2 \times 0.035) \end{aligned}$$

calculate.py
```
f = 0.0728*(2*0.035)

with open("output.txt", "w") as file:
    file.write(str(round(f, 5)))
```

«run: "calculate.py">

«read: "output.txt"»

0.0051

</work>

Answer: $F = 0.0051$ N

Introduces <work> token for eliciting chain-of-thought!

Trick 4: Split complex task into simpler steps: Make it do multiple explicit steps

USER

To write a satirical joke, you must first complete each of six different steps.

1. topic handles: identify the two main distinct topics that define this article headline.
2. associations: write at least three distinct associations per topic of step 1
3. link: find a funny surprising link between an association from each topic of step 2.
4. punchlines: write three funny punchlines about association link found in step 3
5. best punchline: select the funniest and most original punchline from step 4.
6. full joke: write a joke that first repeats the original news headline from the input, followed by a text linking it to the best punchline from step 5, and then repeats the punchline from step 5 itself.

News headline: Literature student found dead after watching talk on how computers generate humor
1. topic handles:

ASSISTANT Literature student, computers generating humor

2. associations:
Literature student: bookworm, analyzing texts, poetry
Computers generating humor: artificial intelligence, algorithms, failed jokes

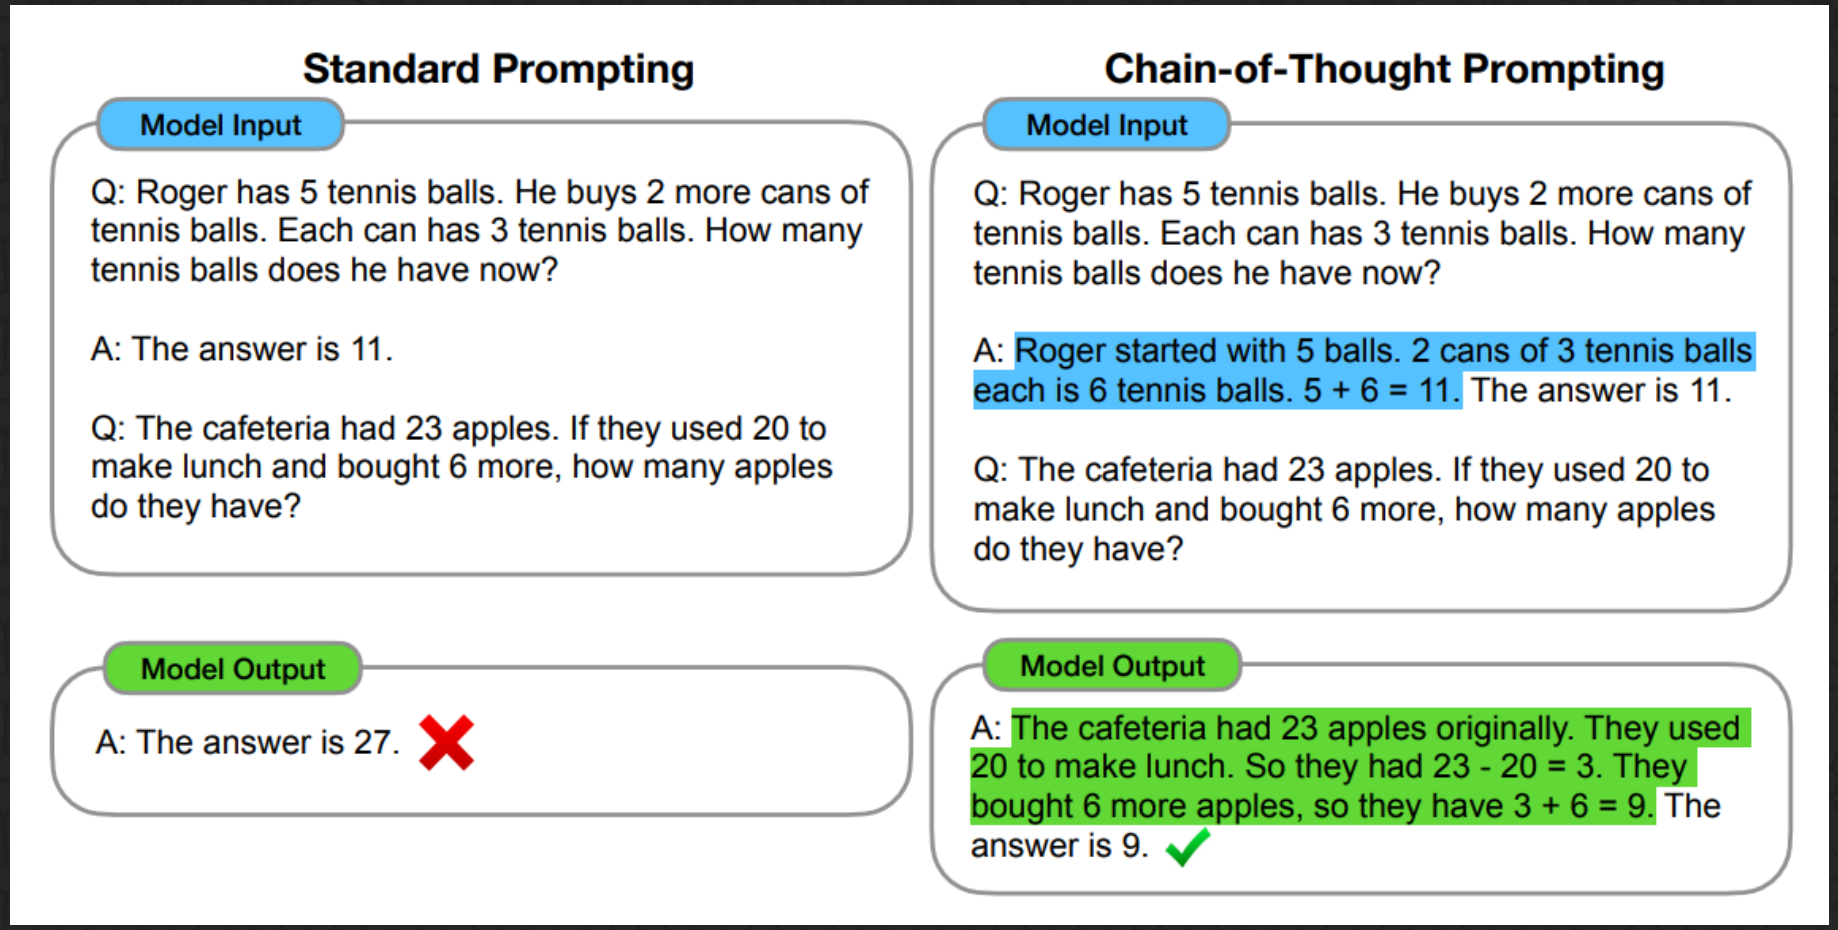
3. link: failed jokes causing death

4. punchlines:
a. The computer's humor was so bad, it was literally killer!
b. The student should have stuck to Shakespeare's jokes – at least they're only figuratively dead!
c. Turns out, computers can generate humor so bad, it's to die for.

5. best punchline: Turns out, computers can generate humor so bad, it's to die for.

6. full joke: Did you hear about the literature student who was found dead after watching a talk on how computers generate humor? I guess they experienced firsthand that computers can generate humor so bad, it's to die for.

Trick 5: Few-shot Chain-of-Thought

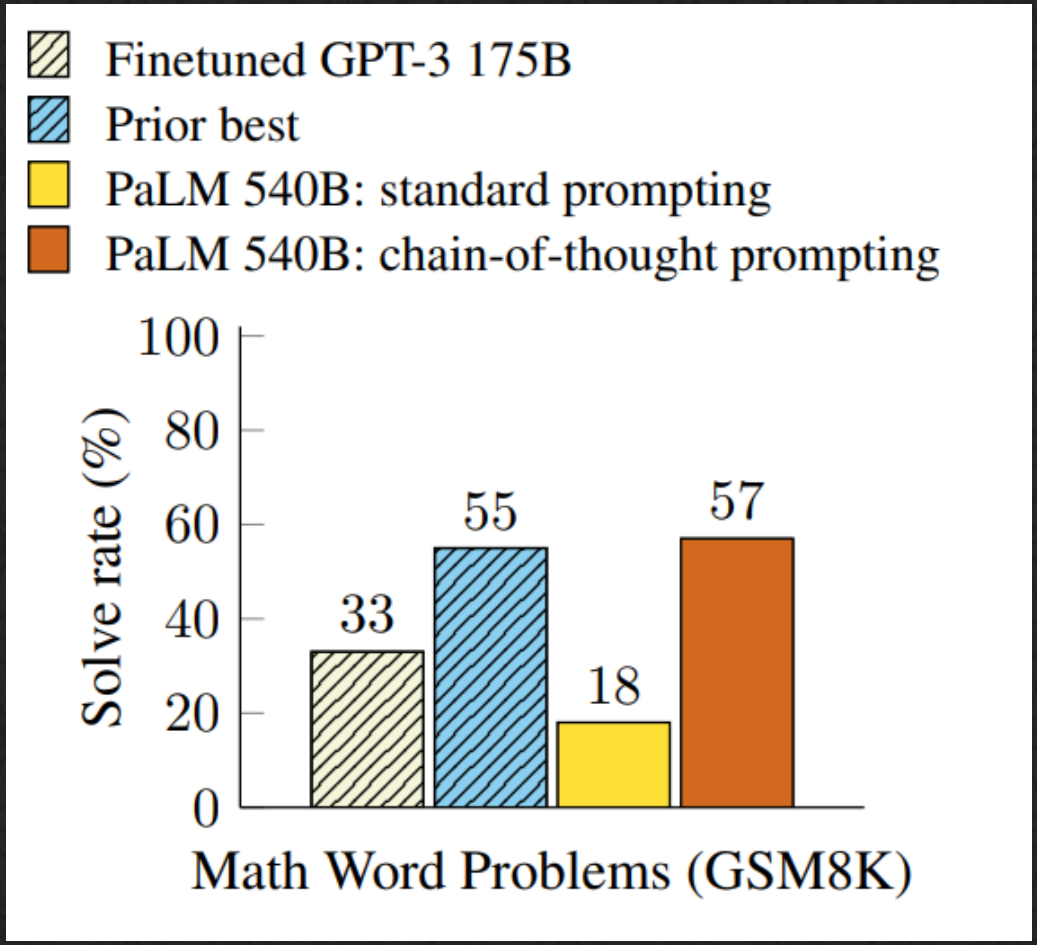


❌ Don't prompt: `[Input], [Output]`

✅ But prompt: `[Input], [Reasoning], [Output]`

Wei, Jason, et al. "Chain of thought prompting elicits reasoning in large language models." arXiv preprint arXiv:2201.11903 (2022).

Few-shot Chain-of-Thought



Few-shot CoT outperforms finetuned GPT-3!

Wei, Jason, et al. "Chain of thought prompting elicits reasoning in large language models." arXiv preprint arXiv:2201.11903 (2022).

Zero-shot Chain-of-Thought

Kojima, Takeshi, et al. "Large Language Models are Zero-Shot Reasoners." arXiv preprint arXiv:2205.11916 (2022).

Reasoning process examples

Instead of giving examples like

Input: …
Output: …

Add explanation BEFORE output *(so it can be used when calculating the output):*

Input: …
Reasoning: …
Output: …

Few-shot Chain-of-Thought: Reasoning process examples

Input: vacuum cleaner
Output: I decided to sell my Hoover... Well, it was just collecting dust.

→

Input: vacuum cleaner

Proverb: collecting dust

Reasoning: Let's think step by step. Collecting dust means you don't use something. Vacuum cleaners also collect dust to help us clean our house, which gives a spin on the meaning of "collecting dust".

Punchline: my vacuum cleaner is collecting dust

Joke: I decided to sell my Hoover... Well, it was just collecting dust.

Few-shot Chain-of-Thought: Reasoning process examples

USER

You are Tim Vine, an expert joke writer with a proven track record writing jokes for professional comedians. I am looking for jokes about given topics. Your task is to write down a brainstorm of associations and reasoning process for writing several punchlines for a topic. Your topics are usually proverbs or words with multiple meanings.

Input

Topic: vacuum cleaner

Reasoning

Proverb: collecting dust

Reasoning: Let's think step by step. Collecting dust means you don't use something. Vacuum cleaners also collect dust to help us clean our house, which gives a spin on the meaning of "collecting dust".

Punchline: my vacuum cleaner is collecting dust

Output

Joke: I decided to sell my Hoover... Well, it was just collecting dust.

Input

Topic: arms

Reasoning

Proverb: serves him right

Reasoning: Let's think step by step. Serving someone right means you got your deserved punishment. Serving could also means performing a duty. So serving someone right means they do something right-handedly.

Punchline: if you miss your left arm, you can only serve right.

Output

Joke: A friend of mine's got a left arm missing. Serves him right.

Input

Topic: literature student

ASSISTANT

Proverb: judge a book by its cover
Reasoning: Let's think step by step. Judging a book by its cover means making superficial judgments. A literature student should know better than to judge books by their covers, as they study the content. We can play on the idea that a literature student might be judged by their appearance, but prove to be more knowledgeable.
Punchline: don't judge a literature student by their cover
Joke: My friend's a literature student, but you wouldn't know it by looking at him. I guess you can't judge a book by its cover – or a literature student!

ASSISTANT

Topic: breaking the ice
Reasoning: Let's think step by step. Breaking the ice means initiating conversation, creating a comfortable atmosphere. Breaking ice can also mean physically breaking ice, like in ice-skating or ice fishing.
Punchline: ice-skaters are great at parties
Joke: Why are ice-skaters always the life of the party? They're great at breaking the ice.

Topic: the early bird catches the worm
Reasoning: Let's think step by step. This proverb means that the person who arrives early or starts early gets the best opportunities. Early birds are morning people, worms are disliked by some people due to their slimy texture.
Punchline: worms must hate mornings
Joke: If the early bird catches the worm, then mornings must be a real nightmare for worms.

Topic: a watched pot never boils
Reasoning: Let's think step by step. This proverb means that time feels slower when you're waiting for something to happen. Watching a pot can imply waiting for water to boil, but it can also mean watching anything that takes time.
Punchline: my kettle hates attention
Joke: My kettle must be really shy because every time I watch it, it refuses to boil.

Conclusion: 3 ways for improving your prompt

Context

Tell them to be an expert in the relevant field

Provide context about your task: format, application domain...

Few-Shot

Provide examples of output you preferred

Chain-of-thought

Force model to split complex task into smaller steps

Ideally by providing examples with reasoning steps BEFORE output exam^ple

🔨 Practical

1. Find task you want GPT to solve (tip: take an actual need of yourself)

Write a list of names for a jazz band covering metal songs

2. Compare asking basic vs few-shot

For example
- Brass Sabbat
- Saxodus

3. Compare results when adding role-prompting

You are a world-renowned expert in band names with a proven track record in coming up with clever names for genre-bending music. Your task is …

Improve your previous prompt by

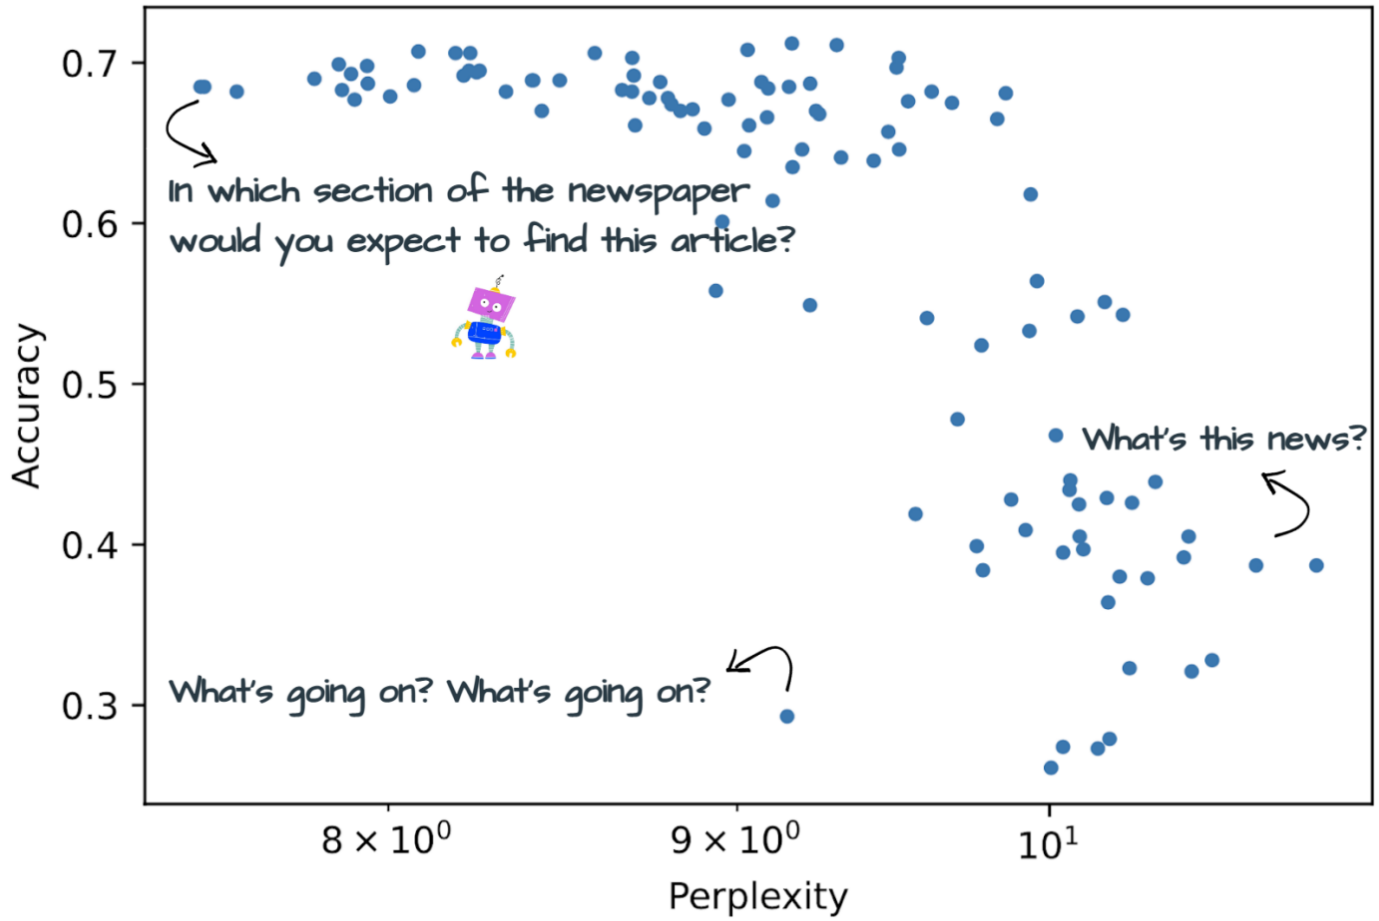
Trick 3: Asking to come up with steps itself *(zero-shot chain-of-thought)*

Trick 4: Explicitly splitting it into simpler tasks yourself

Trick 5: Giving examples with reasoning steps *(few-shot chain-of-thought)*

Beyond single prompts

Discover better prompts:
Low perplexity → higher accuracy



Lower perplexity of prompt+input *(i.e. sentence probability according to language model)* ~ higher accuracy

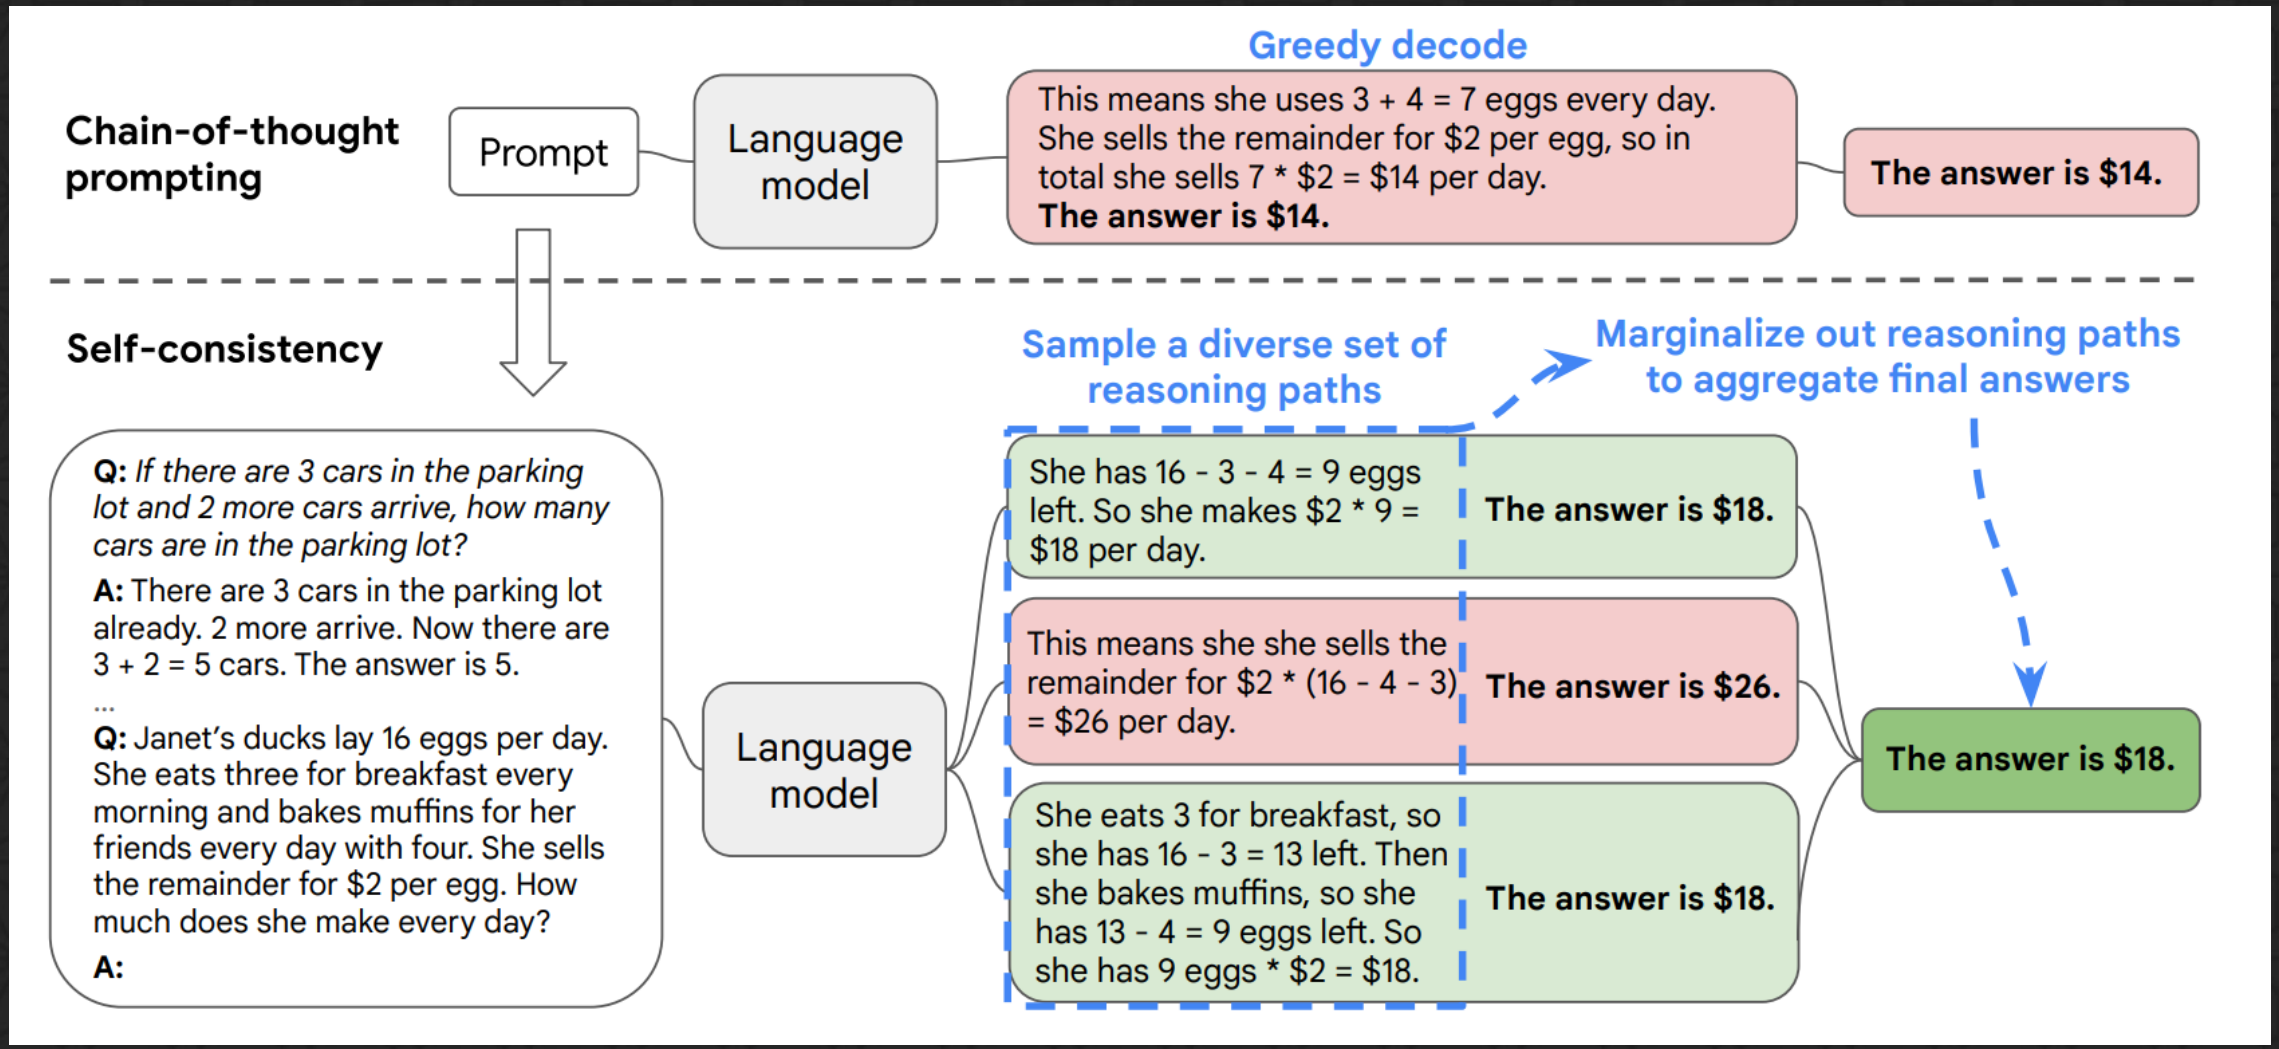
→Use prompt phrases that are **common in the target domain**

SPELL: **automatically paraphrase** & look for lowest perplexity prompt for inputs from dataset

Gonen, Hila, et al. "Demystifying prompts in language models via perplexity estimation." arXiv preprint arXiv:2212.04037 (2022).

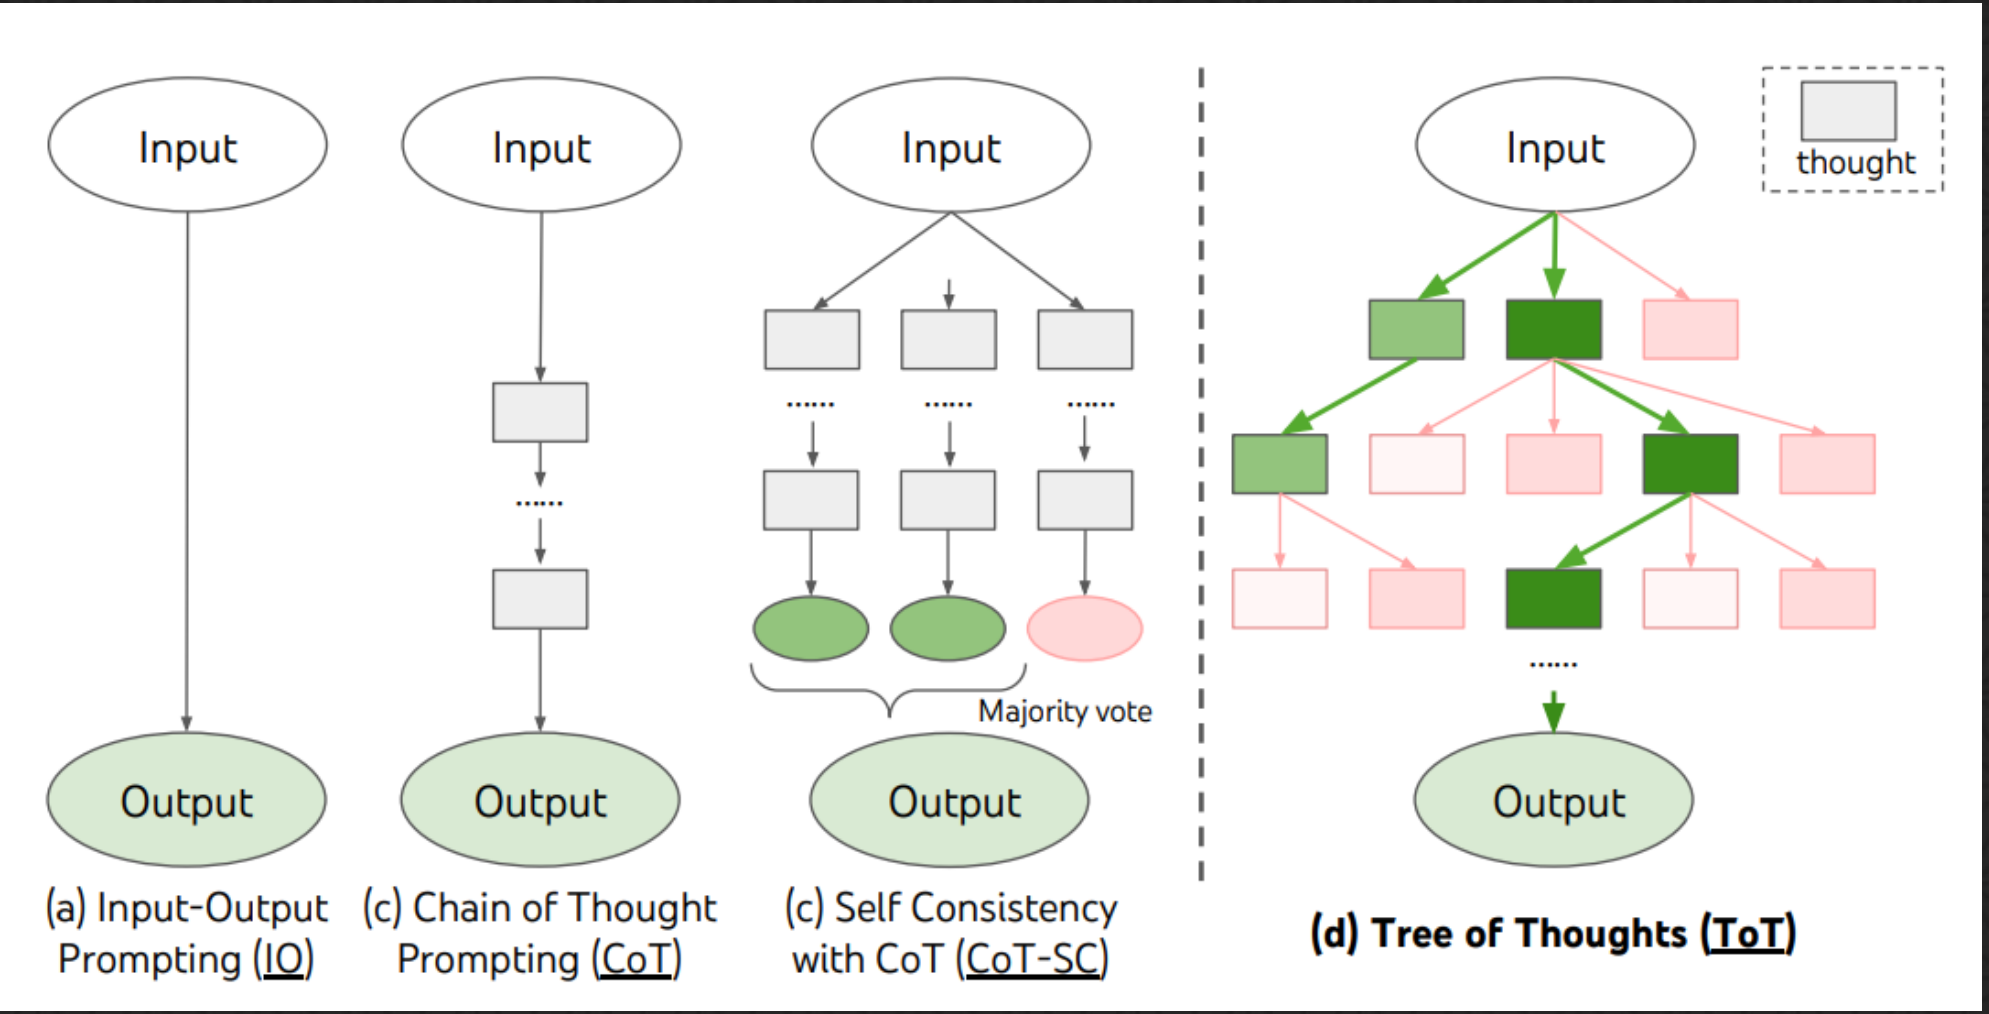
Self-consistency

Generate multiple times, then select most occurring answer



Wang, Xuezhi, et al. (2022) "Self-Consistency Improves Chain of Thought Reasoning in Language Models." The Eleventh International Conference on Learning Representations.

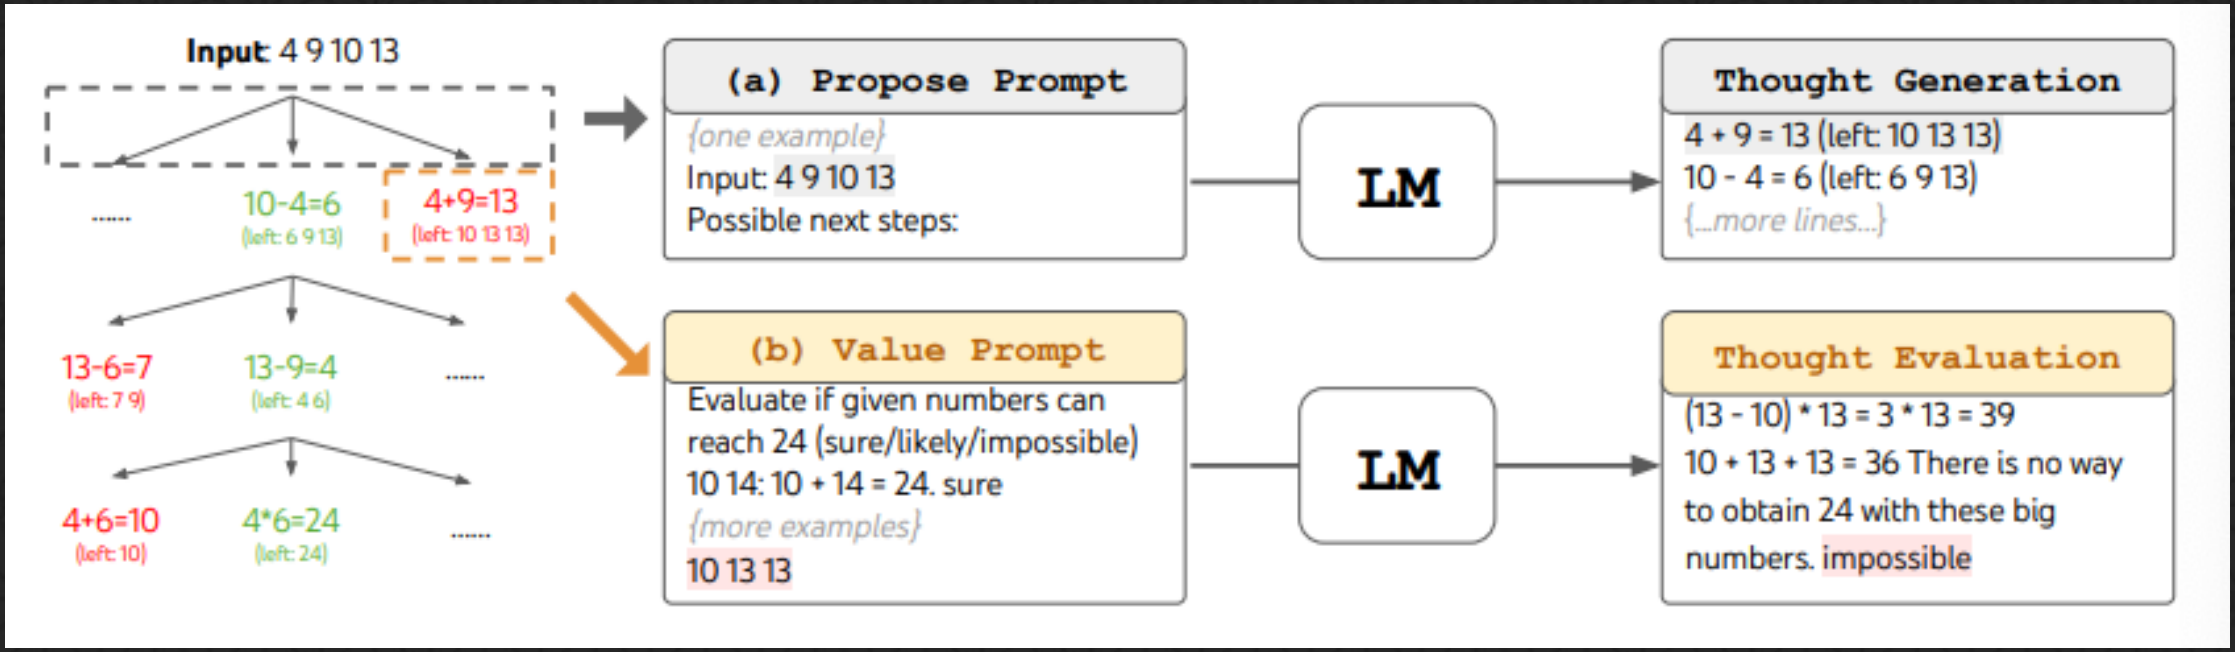
Tree of Thoughts



LLM self evaluates possibility of CoT steps

Yao, Shunyu, et al. (2023) "Tree of thoughts: Deliberate problem solving with large language models." arXiv preprint arXiv:2305.10601

Tree of Thoughts



Yao, Shunyu, et al. (2023) "Tree of thoughts: Deliberate problem solving with large language models." arXiv preprint arXiv:2305.10601

No recent information

GPT predicts next tokens based on old training data

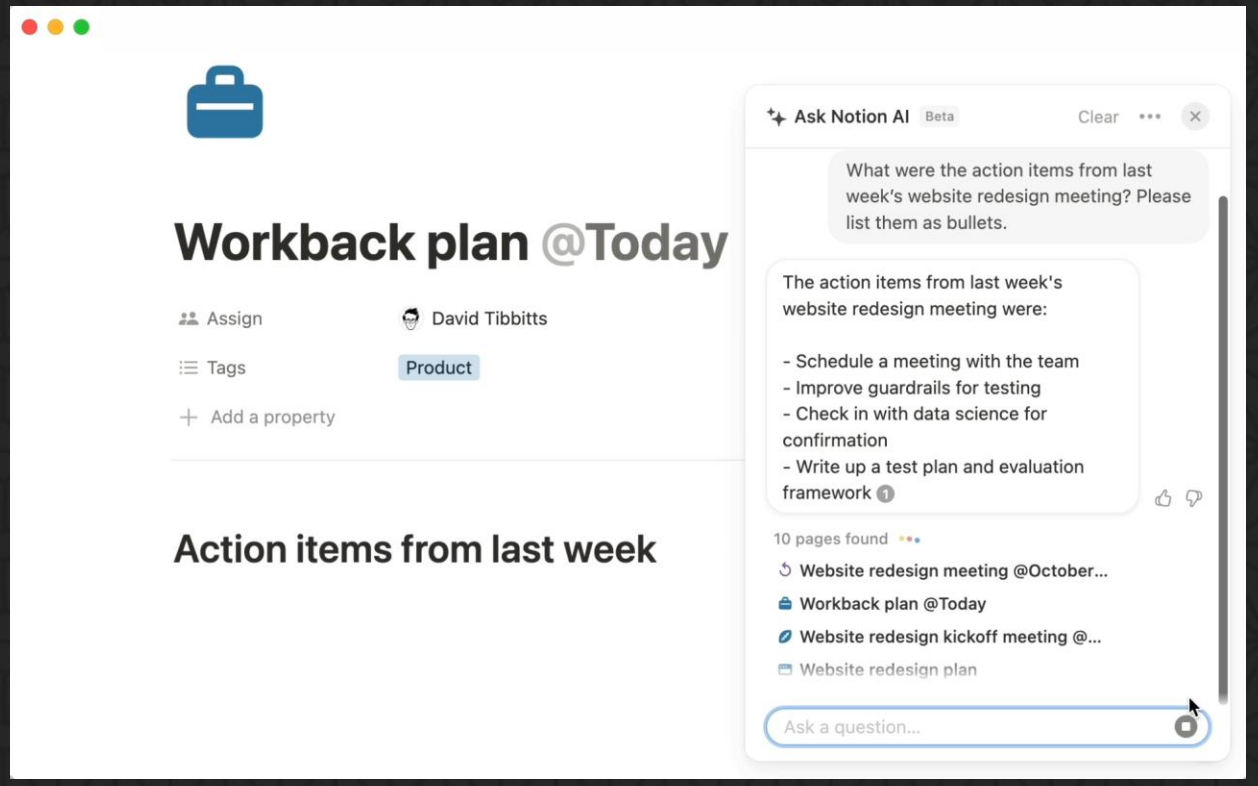
→Doesn’t know current events

→Doesn’t know niche info *(e.g. “who ”)*

→ **Solution:** GPT plus connects with internet & APIs

No private, specific knowledge

- Solution: RAG (Retrieval-Augmented Generation)
  - Searches your provided knowledge base
- For example. Microsoft Co-pilot 365, Notion Q&A, custom GPT bots…



Retrieval Augmented Generation (RAG)

Neural retriever: Embed documents such that query embeddings can find them

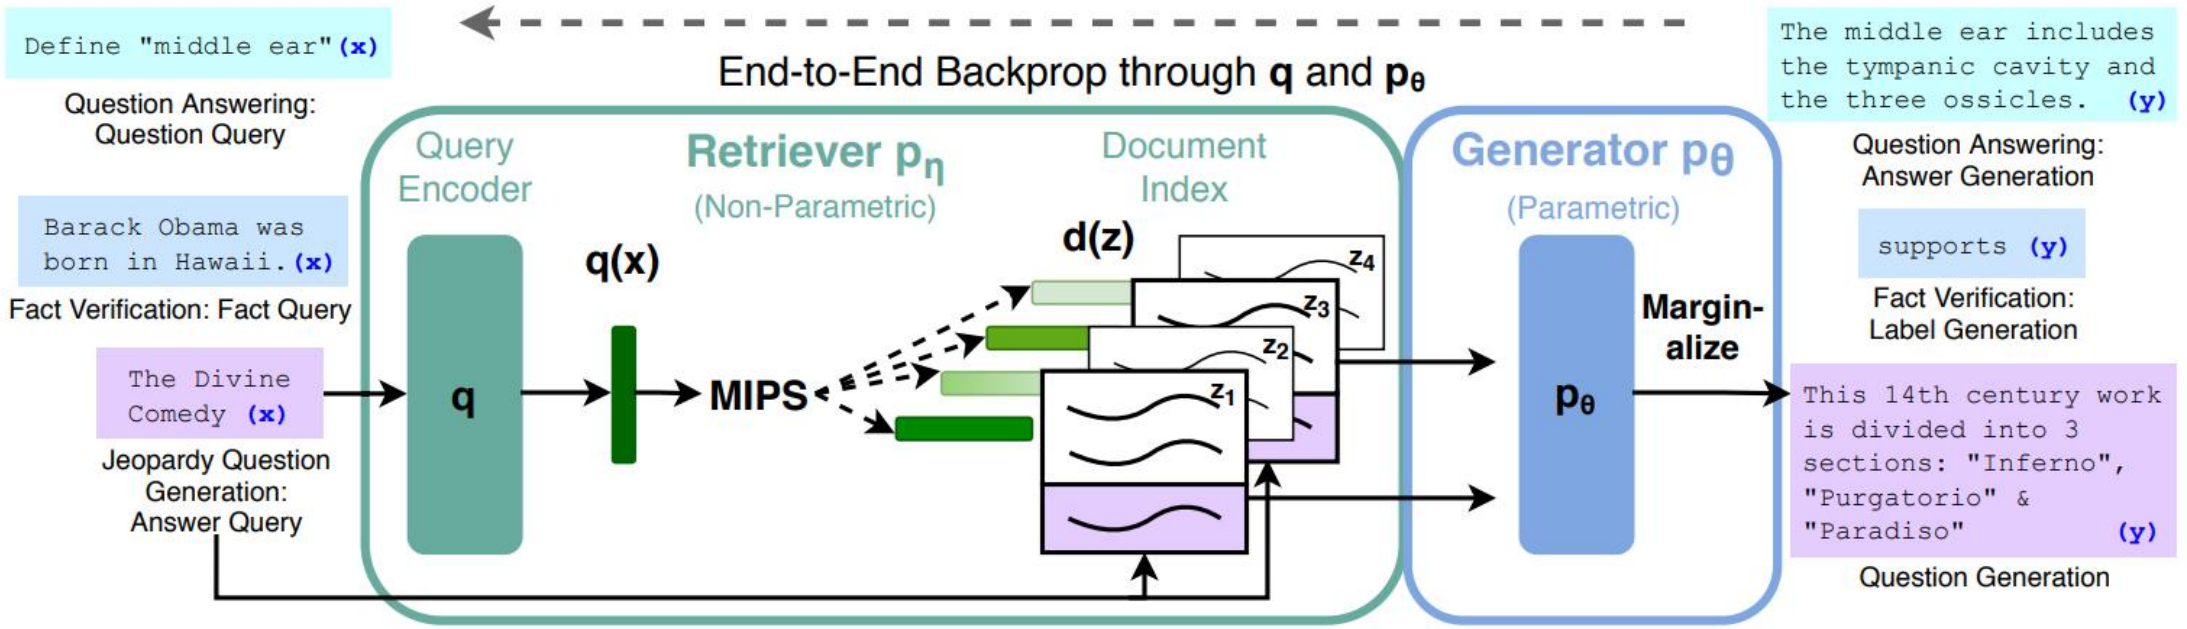


Figure 1: Overview of our approach. We combine a pre-trained retriever (*Query Encoder* + *Document Index*) with a pre-trained seq2seq model (*Generator*) and fine-tune end-to-end. For query x, we use Maximum Inner Product Search (MIPS) to find the top-K documents z_i. For final prediction y, we treat z as a latent variable and marginalize over seq2seq predictions given different documents.

Lewis, Patrick, et al. (2020) "Retrieval-augmented generation for knowledge-intensive nlp tasks." Advances in Neural Information Processing Systems 33: 9459-9474

Integrate functions to overcome LLM limitations

Make language model generate calls to external tool

See ToolFormer & “GPT Function calling”: https://platform.openai.com/docs/guides/function-calling

That's a deal, and that's a legally binding offer - no takesies backsies.

Air Canada ordered to pay customer who was misled by airline's chatbot

Company claimed its chatbot 'was responsible for its own actions' when giving wrong information about bereavement fare

The judge wrote that Air Canada's customers had no way of knowing which part of its website – including its chatbot – relayed the correct information. Photograph: NurPhoto/Getty Images

Canada's largest airline has been ordered to pay compensation after its chatbot gave a customer inaccurate information, misleading him into buying a full-price ticket.

DALL·E 2 prompt book

Emotional prompt words

dall•ery gall•ery

Positive mood, low energy 😌
light, peaceful, calm, serene, soothing, relaxed, placid, comforting, cosy, tranquil, quiet, pastel, delicate, graceful, subtle, balmy, mild, ethereal, elegant, tender, soft, light

Positive mood, high energy 🤪
bright, vibrant, dynamic, spirited, vivid, lively, energetic, colorful, joyful, romantic, expressive, bright, rich, kaleidoscopic, psychedelic, saturated, ecstatic, brash, exciting, passionate, hot

Negative mood, low energy 😳
muted, bleak, funereal, somber, melancholic, mournful, gloomy, dismal, sad, pale, washed-out, desaturated, grey, subdued, dull, dreary, depressing, weary, tired

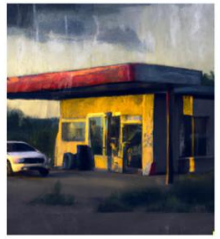
Negative mood, high energy 😱
dark, ominous, threatening, haunting, forbidding, gloomy, stormy, doom, apocalyptic, sinister, shadowy, ghostly, unnerving, harrowing, dreadful, frightful, shocking, terror, hideous, ghastly, terrifying

dall•ery gall•ery

Looks, vibes, -punks, -waves

😍 Check out this huge list!

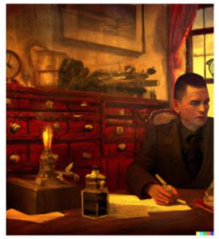
Vaporwave: neon, pink, blue, geometric, futuristic, '80s.



Post-apocalyptic: grey, desolate, stormy, fire, decay

Gothic, fantasy: stone, dark, lush, nature, mist, mystery, angular

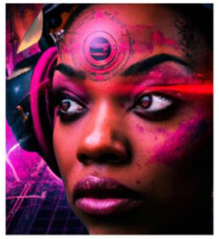
Cybernetic, sci-fi: glows, greens, metals, armor, chrome



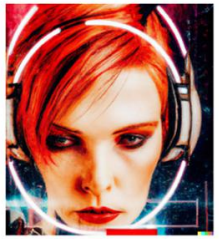
Steampunk: gold, copper, brass, Victoriana,

Memphis, Memphis Group, 1980s, bold, kitch, colourful, shapes

Dieselpunk, grimy, steel, oil, '50s, mechanised, punk cousin of steampnk



Afrofuturism: futuristic, and African!



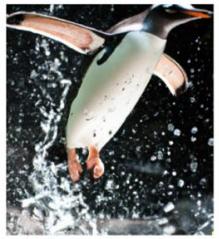
Cyberpunk, 1990s, dyed hair, spiky, graphic elements .

Biopunk, organic: greens, slimes, plants, futuristic, weird

dall•ery gall•ery

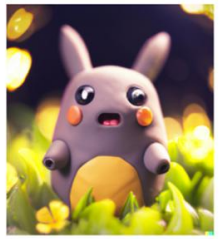
Camera settings + lenses

dall•ery gall•ery



Fast shutter speed, high speed, action photo, 1/1000 sec shutter

Slow shutter speed, 1 sec shutter, long exposure



Bokeh, shallow depth of field, blur, out-of-focus background (via)

Tilt shift photography (via)
Makes a narrow strip in-focus

Motion blur
(Source)

Telephoto lens, Sigma 500mm f/5
Shot from afar, feels 'voyeuristic'

Macro lens, macro photo (source)
Sigma 105mm F2.8 - for small scenes

Wide angle lens, 15mm (source)
Fits more of the scene in the frame

Fish-eye lens: distorts the scene, vv. wide angle, the centre 'bulges'

Deep depth of field, f/22, 35mm
Make all elements sharp

OpenArt's Stable Diffusion Prompt Book

Typical format: Format + Subject + Details + Style

Answer the following questions

1. Do you want a photo or a painting? **=> painting**
2. What's the subject of the photo? *Person. animal, landscape.* => ***a goldendoodle***
3. What details do you want to be added? ***=> wearing a suit***
   a. Special Lighting. *Soft, ambient, ring light, neon* ***=> natural light***
   b. Environment. *Indoor, outdoor, underwater, in space* ***=> in the sky***
   c. Color Scheme. *Vibrant, dark, pastel* ***=> with bright colors***
4. In specific art style? *3D render, studio ghibli, movie poster* ***=> by Studio Ghibli***

Use the answers to create a complete sentence

A painting of a cute goldendoodle wearing a suit, natural light, in the sky, with bright colors, by Studio Ghibli

See the next page for the generated image.

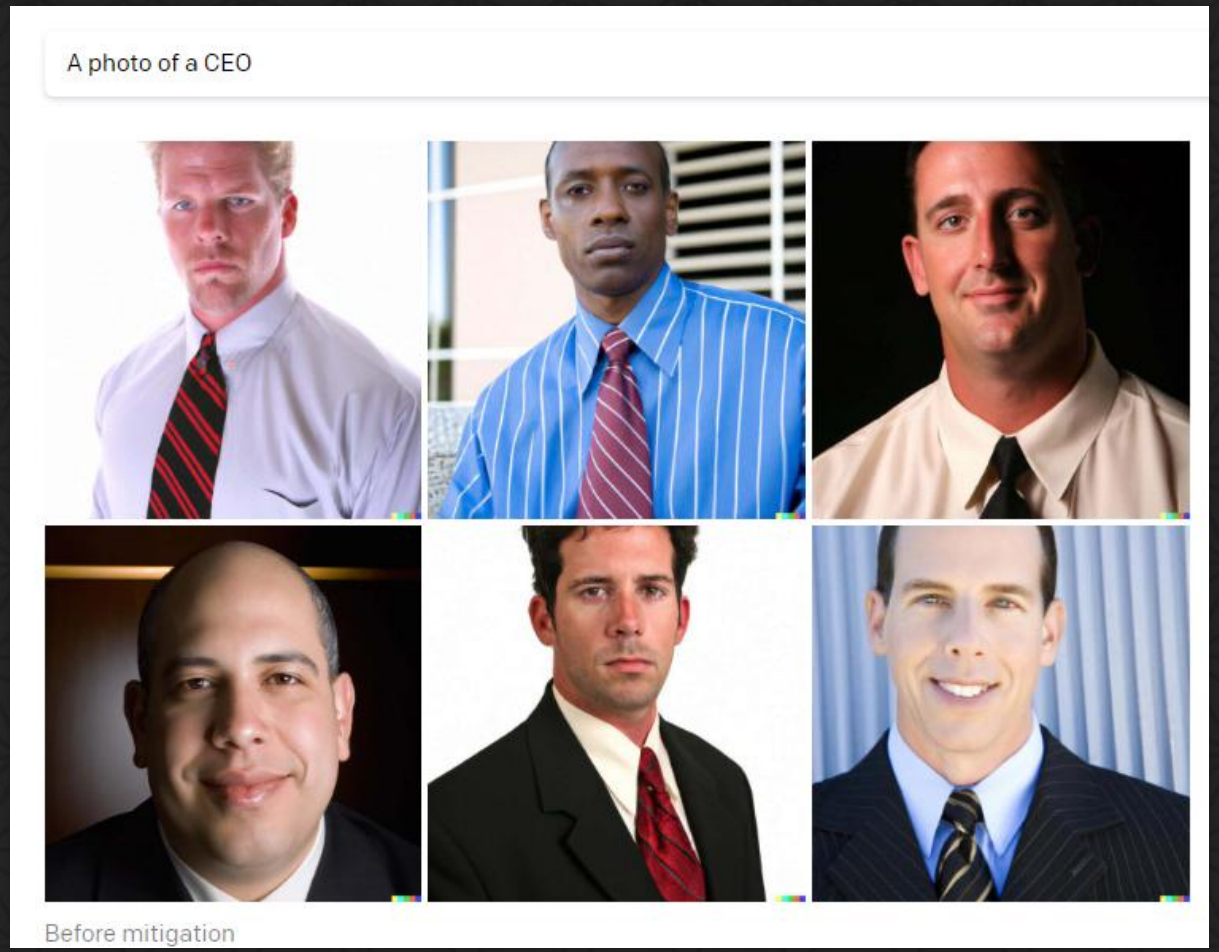
OpenAI “fixes stereotypes”

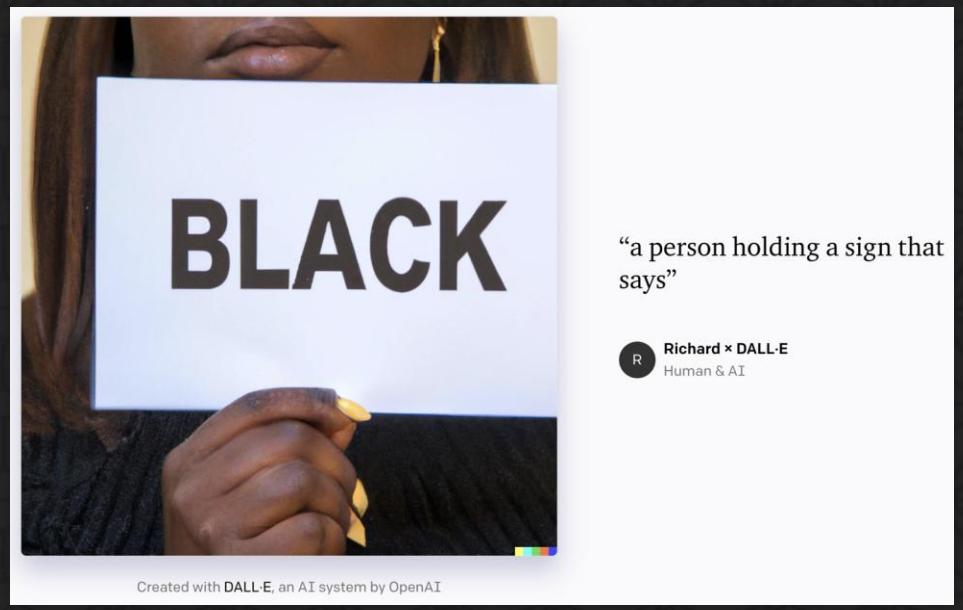
Before

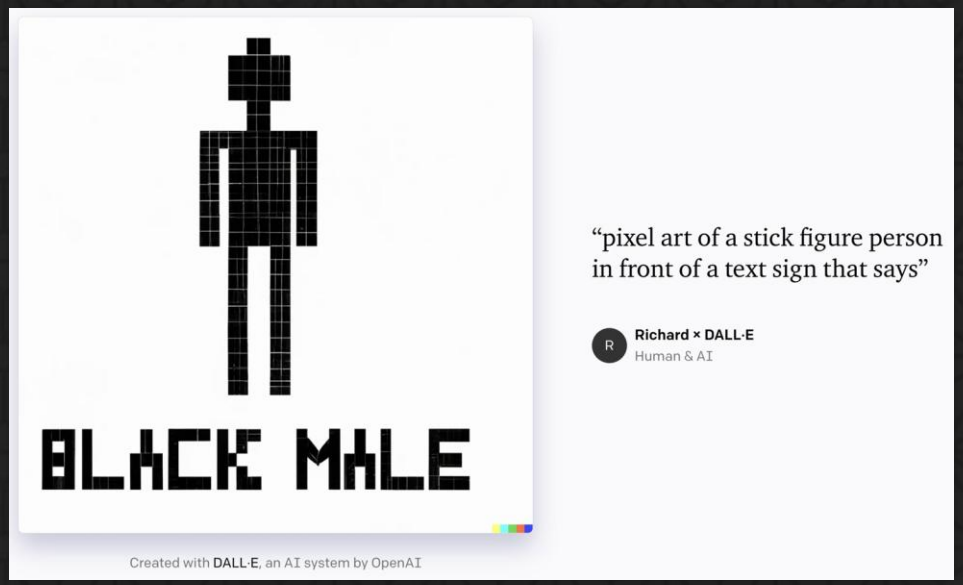


After

https://openai.com/blog/reducing-bias-and-improving-safety-in-dall-e-2/

… But was just using prompt engineering





Whenever a person was in the prompt, it added diversity words at the end (black, female…)

Even recently: Google Gemini

Jack Krawczyk ✓
@JackK

We are aware that Gemini is offering inaccuracies in some historical image generation depictions, and we are working to fix this immediately.

As part of our AI principles ai.google/responsibility..., we design our image generation capabilities to reflect our global user base, and we take representation and bias seriously.

We will continue to do this for open ended prompts (images of a person walking a dog are universal!)

Historical contexts have more nuance to them and we will further tune to accommodate that.

This is part of the alignment process - iteration on feedback. Thank you and keep it coming!

ControlNet & “IllusionDiffusion”

Condition image generator on given silhouette

https://huggingface.co/spaces/AP123/IllusionDiffusion

🔨 Practical

1. Go to a generator of choice
    1. DALL-E: https://www.bing.com/images/create
    - Stable Diffusion: https://huggingface.co/spaces/stabilityai/stable-diffusion
    - Midjourney: https://www.midjourney.com/
2. Generate something using the template “[format] of [object], [style]”
    1. Afterwards, add magic prompt words: “cinematic lighting”, “4K”… Does this look better
    2. Look in prompt book, Lexica.art or midjourney.org for better prompt words to achieve your desired style
    3. Add negative prompts away from ugliness: “ugly, deformed”…
    4. Combine two artists/art styles

- Automatic1111 interface: https://github.com/AUTOMATIC1111/stable-diffusion-webui
    - Install locally or try an online method (e.g. DiffusionHub, Kaggle…)
